### Ice Pop THCa Flower: Bulk Supply for Wholesale Buyers

If you're a distributor, retailer, or product formulator looking to source large quantities of THCa flower, **Ice Pop THCa Flower** offers a crisp, refreshing twist in your lineup. This strain features cooling menthol or mint-like terpene notes (depending on phenotype), paired with strong THCa potency, reliable compliance, and appealing consumer flavor profiles. Lab-tested, well cured, and packaged with care, Ice Pop delivers both flavor and performance—ideal for bulk flower, pre-rolls, extracts, and white-label applications.

## Lab Analysis

Below is a **representative** or **typical** lab profile you might expect for Ice Pop THCa Flower. For actual inventory, always refer to the specific COA.

| Parameter | Typical Result |
|---|---|
| THCa Content | ~ 25-30 % (dry weight) |
| Δ9-THC | < 0.3 % (legal compliance threshold) |
| Total Cannabinoids | ~ 27-31 % |
| Dominant Terpenes | Menthol / Mint, Pinene, Limonene, Myrcene |
| Flavor / Aroma Profile | Cool mint or "ice pop" sweetness, crisp finish |
| Moisture Content | < 12 % |
| Heavy Metals & Pesticides | Passed safety limits, non-detectable levels |
| Microbial & Mycotoxin Levels | Within regulatory acceptable range |

## Wholesale Advantages of Ice Pop THCa Flower

1. **Strong Flavor Appeal**
   The cooling “ice” or mint-like profile helps differentiate in a crowded market. Consumers often seek fresh, clean, cooling strains for daytime or polish-style varieties.

2. **Cost Efficiency & Volume Savings**
   Bulk purchasing (10 lbs, 50 lbs, 100 lbs) reduces cost per gram significantly, improving margins for both wholesalers and retailers.

3. **Consistent Quality & Compliance**
   Full COAs per batch ensure Δ9-THC remains under legal limits, terpene profiles are stable, and safety parameters met (heavy metals, microbial, pesticide).

4. **Versatility in Use**
   Works well as flower, pre-rolls, cold-infusions, extracts, or as a standout flavor note in blended products.

5. **Brand Differentiation**
   Flavorful and clean strains like Ice Pop let brands stand out with a “cool” or “fresh” angle—good for marketing and customer loyalty.

6. **Supply Reliability**
   With proper cultivation, drying, curing, and storage, inventory can be maintained with minimal variance—important for wholesale contracts or recurring orders.

# FAQs

**What is THCa, and how does it differ from Δ9-THC?**
THCa (tetrahydrocannabinolic acid) is the non-psychoactive precursor to Δ9-THC. When heated (vaporized, smoked), THCa converts to Δ9-THC, which produces psychoactive effects. Before heating, THCa itself is not psychoactive.

**Is Ice Pop THCa Flower legal under federal law?**
Yes—if the Δ9-THC content (in the dried flower, before sale) is under 0.3% by weight, it typically meets the requirements of the 2018 U.S. Farm Bill. Always confirm compliance with state and local laws.

**How should I store bulk Ice Pop THCa Flower to preserve flavor and potency?**
Store in airtight, light-blocking containers in a cool, dark place (≈ 60-70°F), humidity around 55-62% RH. Avoid heat, UV light, and high moisture which degrade terpenes and cause decarboxylation.

**What are the minimum wholesale quantities (MOQs)?**
Standard MOQs often begin around **10 lbs**, with pricing improvements at larger tiers (25 lbs, 50 lbs, 100 lbs). Packaging (bulk bags, vacuum sealed, private label jars) can be customized depending on quantity.

**Will I always receive a current COA with surplus batches?**
A reputable supplier provides a COA for each batch, showing potency (THCa, Δ9-THC), terpenes, contaminants, moisture, etc. Buyers should have region-appropriate copies for labeling and legal compliance.

**What kind of effects and consumer experience can be expected?**
Users often report a refreshing, cool inhale with clean throat, followed by clear headed effects, mild uplift, and possibly mild physical relaxation—depending on

phenotype and consumption method.
