Wholesale Offer: Candy Crave THCa Flower for Bulk Buyers

For distributors, retailers, and product developers sourcing **Candy Crave THCa Flower** in large quantities, this strain delivers exceptional value. Candy Crave is a high-potency THCa hemp flower, grown with care to preserve potent cannabinoid content, compliant Δ9-THC levels, and a sweet, candy-like terpene profile. Ideal for bulk orders, resale, pre-rolls, extracts, or white-label products, it comes with full lab analysis to support regulatory compliance and quality assurance.

Lab Analysis

Below is a sample/representative lab analysis for Candy Crave THCa Flower. Use your most recent COA for exact current values.

Parameter	Result (Typical)
THCa Content	~ 28-32 % (dry weight)
Δ9-THC	< 0.3 % (legal threshold)
Total Cannabinoids	~ 30-33 %
Dominant Terpenes	Sweet candy, cherry, limonene, caryophyllene
Moisture Content	< 12 % (ideal for storage & burning)
Heavy Metals & Pesticides	Non-detectable / passes safety limits
Microbial & Mycotoxin Levels	Within acceptable safety range

Similar and Popular Strains Customers Might Also Be Interested In

Wholesale buyers stocking Candy Crave often also carry or inquire about:

- Candy Rain THCa Flower – sweet, fruity, almost dessert-like hybrid flavor profile.

- Gelato THCa Strains – creamy, dessert aromas with strong consumer recognition.
- Cherry Poppers THCa Flower – cherry/citrus forward with sativa energy.
- Blueberry / Berry-Forward THCa Flowers – rich berry terpene experiences.
- Citrus & Candy Hybrid Strains – for variety in terpene profiles and flavor appeal.

Wholesale Advantages of Candy Crave THCa Flower

1. **Bulk Pricing & Volume Discounts**
   When ordering large quantities (10 lbs, 50 lbs, or more), cost per pound drops significantly, increasing your margin.
2. **Consistent Potency & Quality**
   Full COAs supplied with every lot ensure you can label correctly and build trust with your customers/regulators.
3. **Regulatory Compliance**
   Δ9-THC remains under the legal threshold (< 0.3 %) in the dried flower; pesticide & heavy metals testing ensures safety.
4. **Versatility**
   Suitable for flower resale, pre-rolls, extracts, resins, infusions—diverse product opportunities.

5. **Brand Differentiation**
   The candy-sweet terpene profile and high THCa potency helps your product line stand out.

6. **Supply Chain Reliability**
   Stable production methods ensure predictable harvest cycles and inventory you can count on.

Frequently Asked Questions (FAQs)

What is THCa, and how is it different from Δ9-THC?
THCa (tetrahydrocannabinolic acid) is the non-psychoactive precursor to Δ9-THC. It only converts to psychoactive THC when heated (e.g., during smoking, vaping, or decarboxylation). In raw or non-heated form, THCa is not psychoactive under standard understanding.

Will Candy Crave THCa Flower pass regulatory testing in most U.S. states?
Yes, provided the flower tests with Δ9-THC below 0.3% (dry weight) and meets all other safety requirements (heavy metals, pesticides, microbial content). Always verify state-specific regulations before sale or transport.

How should large quantities be stored to maintain potency and terpene profile?
Store in airtight, light-proof containers; control temperature (ideally around 60-70°F) and humidity (≈ 55-62% RH). Avoid UV and extreme heat to prevent degradation.

What are typical minimum order quantities (MOQs) for wholesale?
MOQs often start at **10 lbs**, with pricing tiers at **50 lbs**, **100 lbs**, etc. Packaging options vary (bulk totes, vacuum sealed bags, jars) depending on your needs.

Can I request custom packaging or labeling for Candy Crave?
Yes. Many wholesalers/retailers arrange for white label packaging or custom labeling, provided you supply artwork and meet minimum order volumes.

Is there a risk of Δ9-THC increasing over time or with transport?
Proper curing and storage help minimize changes. However, heat, light, and oxidation can sometimes increase decarboxylation of THCa to Δ9-THC, so controlling environment during shipping and storage is important.
