

## Ice Pop THCa Flower: Bulk Supply for Wholesale Buyers

If you're a distributor, retailer, or product formulator looking to source large quantities of THCa flower, **Ice Pop THCa Flower** offers a crisp, refreshing twist in your lineup. This strain features cooling menthol or mint-like terpene notes (depending on phenotype), paired with strong THCa potency, reliable compliance, and appealing consumer flavor profiles. Lab-tested, well cured, and packaged with care, Ice Pop delivers both flavor and performance—ideal for bulk flower, pre-rolls, extracts, and white-label applications.

## Lab Analysis

Below is a **representative** or **typical** lab profile you might expect for Ice Pop THCa Flower. For actual inventory, always refer to the specific COA.

| Parameter                    | Typical Result                                 |
|------------------------------|--|
| THCa Content                 | ~ 25-30 % (dry weight)                         |
| $\Delta$ 9-THC               | < 0.3 % (legal compliance threshold)           |
| Total Cannabinoids           | ~ 27-31 %                                      |
| Dominant Terpenes            | Menthol / Mint, Pinene, Limonene, Myrcene      |
| Flavor / Aroma Profile       | Cool mint or "ice pop" sweetness, crisp finish |
| Moisture Content             | < 12 %   |
| Heavy Metals & Pesticides    | Passed safety limits, non-detectable levels    |
| Microbial & Mycotoxin Levels | Within regulatory acceptable range             |

## Wholesale Advantages of Ice Pop THCa Flower

### 1. **Strong Flavor Appeal**

The cooling “ice” or mint-like profile helps differentiate in a crowded market. Consumers often seek fresh, clean, cooling strains for daytime or polish-style varieties.

### 2. **Cost Efficiency & Volume Savings**

Bulk purchasing (10 lbs, 50 lbs, 100 lbs) reduces cost per gram significantly, improving margins for both wholesalers and retailers.

### 3. **Consistent Quality & Compliance**

Full COAs per batch ensure  $\Delta 9$ -THC remains under legal limits, terpene profiles are stable, and safety parameters met (heavy metals, microbial, pesticide).

### 4. **Versatility in Use**

Works well as flower, pre-rolls, cold-infusions, extracts, or as a standout flavor note in blended products.

### 5. **Brand Differentiation**

Flavorful and clean strains like Ice Pop let brands stand out with a “cool” or “fresh” angle—good for marketing and customer loyalty.

## 6. **Supply Reliability**

With proper cultivation, drying, curing, and storage, inventory can be maintained with minimal variance—important for wholesale contracts or recurring orders.

## **FAQs**

### **What is THCa, and how does it differ from Δ9-THC?**

THCa (tetrahydrocannabinolic acid) is the non-psychoactive precursor to Δ9-THC. When heated (vaporized, smoked), THCa converts to Δ9-THC, which produces psychoactive effects. Before heating, THCa itself is not psychoactive.

### **Is Ice Pop THCa Flower legal under federal law?**

Yes—if the Δ9-THC content (in the dried flower, before sale) is under 0.3% by weight, it typically meets the requirements of the 2018 U.S. Farm Bill. Always confirm compliance with state and local laws.

### **How should I store bulk Ice Pop THCa Flower to preserve flavor and potency?**

Store in airtight, light-blocking containers in a cool, dark place ( $\approx 60\text{-}70^\circ\text{F}$ ), humidity around 55-62% RH. Avoid heat, UV light, and high moisture which degrade terpenes and cause decarboxylation.

### **What are the minimum wholesale quantities (MOQs)?**

Standard MOQs often begin around **10 lbs**, with pricing improvements at larger tiers (25 lbs, 50 lbs, 100 lbs). Packaging (bulk bags, vacuum sealed, private label jars) can be customized depending on quantity.

### **Will I always receive a current COA with surplus batches?**

A reputable supplier provides a COA for each batch, showing potency (THCa, Δ9-THC), terpenes, contaminants, moisture, etc. Buyers should have region-appropriate copies for labeling and legal compliance.

### **What kind of effects and consumer experience can be expected?**

Users often report a refreshing, cool inhale with clean throat, followed by clear headed effects, mild uplift, and possibly mild physical relaxation—depending on

phenotype and consumption method.
